LESS WATER,
HIGHER PERFORMANCE

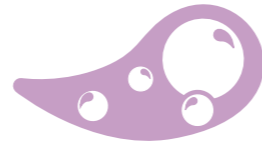

As a result of constant machine up-
grading and technological innovation,
this ECO2 system - a perfect synthesis
between ECOlogy and ECONomy, dra-
matically brings the water consumption
to the lowest level ever recorded in the
market. A revolutionary "Active dripping"
zone between the wash module and the
standard pre-rinse – ECOrinse – module.
A further recycle of the pre-rinse water
is performed in this new Active dripping
zone , removing from the dishware most
of the detergent before it enters the final
rinse zone. The rinse water is basically re-
used for a first time in the prerinse phase
and recycled in the active dripping zone.
**That's how we present a 100 litres
per hour fresh water consumption,
far beyond the average 150/300 li-
tres per hour the market is offering.**

We ask you less. We give you more.

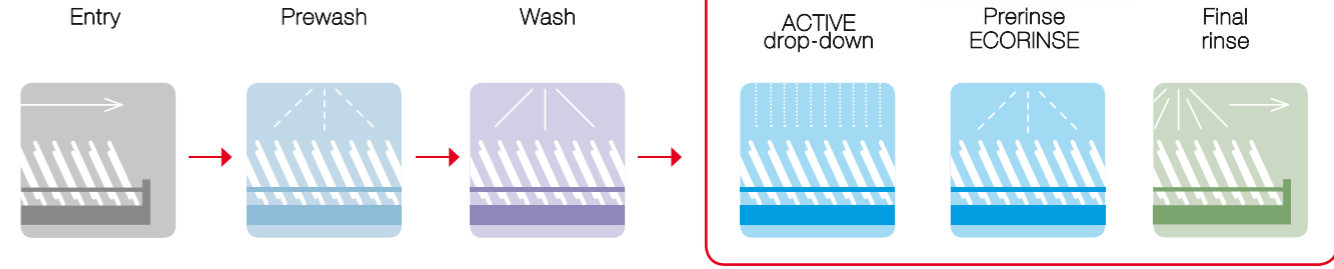

LESS ENERGY,
HUGE SAVING

**50% energy reduction thanks
to this revolutionary system,**
consuming such a limited amount
of water. Furthermore, a lower to-
tal kW load has led to reduced in-
stallation and maintenance costs.

LESS CHEMICALS,
GREENER WORLD

This ECO2 system, applied to rack
conveyor dishwashers, makes a
huge saving in chemical consump-
tion possible: such a very limited
amount of water involves a dramatic
reduction in rinse aid consumption
**The same concept applies to de-
tergent consumption and leads
to a remarkable 50% reduction,** a
true worldwide record in the market.
